Nihith Konakalla

nihinihith@gmail.com 9701553734 Jangareddygudem,Andhra Pradesh

Summary

Technology professional with experience in software quality, automation, Agile collaboration, and AI-assisted development. Skilled in Java, Python, SQL, Jira, and cross-functional teamwork, with a growing foundation in product discovery, requirements analysis, and data-driven decision-making. Combines technical expertise with product thinking to understand customer needs, support effective delivery, and solve business problems.

Professional Experience

Programmer Analyst | Automation Test Engineer, *Cognizant Technology Solutions* Jul 2024 – Present

Joined as Programmer Analyst Trainee and progressed to Programmer Analyst / Automation Test Engineer in September 2025. Collaborated with developers and QA team members in an Agile/Scrum environment to identify, prioritize, track, and resolve product defects.

• Designed and executed functional and regression test scenarios for web applications, helping validate product workflows and improve release quality.

• Translated application requirements and business workflows into structured test scenarios and acceptance-oriented validation.

• Leveraged AI-assisted tools and prompt engineering techniques to accelerate test-case creation and automation script development.

Education

Bachelor of Technology in Artificial Intelligence and Data Science, 2020 – 2024

Vishnu Institute of Technology

Skills

Product Management
Product Discovery, Market Research, Product Strategy, Requirements Analysis, Prioritisation, Product Metrics

Agile & Project Management
Agile/Scrum, Sprint Planning, Backlog Management,Cross-functional Collaboration, Jira

AI & Generative AI
Generative AI, Agentic AI, Prompt Engineering, AI-assisted Prototype Development

Testing & Quality
SQL, Python, Java, Selenium WebDriver, TestNG, Git

Projects

SakhiAI , *AI-powered PCOS health companion for women*

- Identified gaps in PCOS self-management and access to personalised support, with a potential user population of ~4.2 crore Indian women; conducted empathy interviews, developed user personas, and applied Design Thinking, SCAMPER, and ERRC frameworks to prioritise user needs.
- Defined the CVP, target users, problem statement, solution, and Lean Canvas to establish the product strategy.
- Created a PRD and translated validated needs into 43 prioritised user stories across 5 modules, defining the MVP scope based on user value, impact, and feasibility.
- Applied RICE and MoSCoW prioritisation to make feature-level product decisions and determine what should be included in the MVP.
- Defined MVP requirements for an AI product using Generative AI and Agentic AI, including a multilingual PCOS chatbot across English, Hindi, and Telugu, symptom tracking, lab report analysis, and meal planning.

Insurance Policy Management Automation Framework

- Worked with insurance policy management workflows covering policy creation, customer onboarding, and policy lifecycle processes.
- Analyzed business workflows and translated them into structured validation scenarios for critical product journeys.
- Developed a reusable Selenium WebDriver automation framework using Java, TestNG, and Page Object Model principles to improve release confidence and product quality.
- Used AI-assisted tools to accelerate test-case design and automation development.

Certificates

Product Management with Generative and Agentic AI
Issued by Masai X BITSoM CEPD
